Portfolio: raphaelmoreira.netlify.app

SUMMARY

Full-stack developer with production experience in SQL and Python automation, seeking to apply API design and web development skills to a junior developer role. Proven ability to deliver complete, deployed applications using React, Node.js, and PostgreSQL.

EDUCATION

New Jersey Institute of Technology | Newark, NJ | Sep. 2020 - Dec. 2024

Bachelor of Engineering Technology in Computer Technology | GPA: 3.75 | Dean's List

EXPERIENCE

Bergen Logistics | WMS Support Specialist | North Bergen, NJ | May 2024 - Mar. 2026

- Designed and delivered custom SQL-based reports for inventory management and operational performance, used by executive teams for strategic decision-making.
- Automated recurring and ad-hoc reporting workflows using Python, eliminating manual data entry and significantly reducing delivery turnaround time across multiple client accounts.
- Provided technical support for the Warehouse Management System (WMS), troubleshooting configuration and performance issues to maintain seamless warehouse operations.

PROJECTS

Chirp | React, Node.js, Express, PostgreSQL, Prisma

- Built a full-stack Twitter/X clone with JWT authentication, posts, likes, comments, follow system, and user profiles.
- Designed a self-referential Follow model in PostgreSQL to handle bidirectional user relationships, enabling efficient feed queries that fetch posts from followed users without N+1 database calls.
- Deployed frontend on Netlify, backend on Render, and database on Neon (PostgreSQL).

Messaging App | React, Node.js, Express, PostgreSQL, Prisma

- Developed a full-stack Discord-inspired messaging app with direct and group conversations, friend requests, and user profiles.
- Architected a many-to-many conversation model allowing users to belong to multiple group chats simultaneously, with deduplication logic to prevent duplicate DM conversations from being created.
- Implemented JWT authentication with bcrypt password hashing and Passport.js middleware for protected route access.

Find It | React, Node.js, Express, PostgreSQL, Prisma

- Created a Where's Waldo inspired photo tagging game with real-time character detection and a global leaderboard.
- Implemented coordinate-based click validation on the backend to prevent client-side cheating, ensuring game integrity without exposing character coordinates to the frontend.

TECHNICAL SKILLS

- Languages: JavaScript, Python, HTML, CSS, SQL
- Frontend: React, React Router, Vite, Responsive Design
- Backend: Node.js, Express, Passport.js, REST APIs
- Databases: PostgreSQL, Prisma ORM, MySQL, MongoDB
- Tools: Git, Docker, Cloudinary, Netlify, Render, Neon
